prop

callback

withContext enables
a Component to
receive an object
globals that has been
declared by *Provider*

Provider App Doc MdDoc

globals

context bypasses intermediate components

withContext

globals

Alternative

{...globals}

receive context
unpack *globals*
pass them as props
to *Alternative*

saveState enables
a Component to
save its state elsewhere,
in a *Store*, when
Component is being
destroyed.
When it is being
resurrected, it receives
the last saved state as
initial state.

saveState

Store

ContribsFiltered

constructor:
fetch initial state form *Store*
